What Should I Consider When Getting Discount Shades?

You have to look good in your sunglasses. There's no question about that. Of course, they sit right in the middle of your face! And while they're on, your shades are potentially the very first thing that someone else notices on your face. But naturally, to look great in two sunglasses, you don't need to go out and spend a bundle on them. From a simple trip to a chemist, dep. store or shop, to a fast search on the net, it isn't difficult to see that you can find yourself an attention-grabbing pair of shades at a good price.

But looks are not everything! Sun shades serve a very important purpose, besides shading your eyes and complementing your good looks. They guard your eyes and your vision from the dangerous ultraviolet, or UV, rays of the sun. Just as these UV rays may cause sunburn, sunspots, and skin cancer on the remainder of your body, these dangerous UV rays can also damage your eyes.

One type of UV light particularly UVBs can cause transient blindness with a syndrome known as photokeratitis, or snow blindness. Photokeratitis occurs when your cornea gets burned by the Ultraviolet B rays. The damage and discomfort can last up to 2 days. Long-term exposure to UV rays can also be accountable for macular degeneration, cataracts, or epidermal carcinoma around the eyelids if your eyes aren't protected outdoors.

Sun shades are supposed to defend your eyes from these damaging results of the sun. Though not all discount brand shades do the job. It's vital to consider whether 2 sunglasses can adequately block out UV rays. Check the labels on the sunglasses before purchasing them. All shades should block out 99-100% of UV rays.

In addition to defending your eyes and distilling out UV rays, sun shades should also reduce glare and be cushy to wear. Sunglasses containing polarized lenses are especially great for reducing glare, and are favored by outdoorsman for activities like fishing and boating. The color of your shades lens might also reduce glare. Brown, Amber, Yellow and Red lenses reduce more glare than other lens tints.

Nothing is finer than being outside on a bright spring or summer day, soaking up the rays, playing in the water, or having a family picnic. So just remember to wear satisfactory clothes, suntan lotion and your shades. The last thing to consider before buying your discount shades; they might be worth your while because when you lose them, it won't hurt your wallet so much!
